

Features and Benefits

ANTRONIX®

FPD-RD 5/16" Nut Driver with Push-On Power Detect Indicator

This Antronix multipurpose nut driver includes an embedded power indicator in the handle. To determine if AC power is present on an F-port, simply press the push-on F-male power indicator onto an F-port and the handle glows red to indicate AC power is present on the center pin of the F-port.

The tool is great for installing the MGT2000-SDPE power extracting tap to power telephony devices or Wi-Fi radios. The quick push-on test can determine which F-port has AC power without removing any covers or tap plates for a quick installation.

Specifications

Nut Driver	5/16" Hex
AC Voltage Detect Range	50 VAC – 95 VAC, 50/60 Hz
Indicator Light	Red LED Embedded in Handle
Hex Tool Material	Carbon Steel (Grade 45) with Chrome Plating
